7-Day Personalized Diet Plan

Mr. Hajimalung Baba — Age 32 | Male | 84.35 kg | 167 cm

Generated: 9-May-2026 | Based on: Lucid Diagnostics Lab Report LAB122522087 dated 31-Dec-2025

1 Health Summary & Dietary Focus Areas

Patient:

32-year-old male | 84.35 kg | 167 cm | Sedentary desk job (9–6 office, 2-wheeler commute, sleep 11 PM)

Priority	Concern	Dietary Strategy
🔴 #1	Body fat 30.7% + Visceral fat 12.4	500 kcal/day deficit via diet
🔴 #2	Lipid profile (LDL 153, CHOL/HDL 5.64, LDL/HDL 3.82)	Cut saturated fats, add omega-3 and fiber
🟡 #3	HbA1c 5.8% (prediabetes range)	Reduce refined carbs, prioritize low-GI foods
🟡 #4	Low skeletal muscle (47.7%) + low bone mass (3 kg)	Protein target 100–110 g/day
🟡 #5	Low body water (48%)	Hydration target 3–3.5 L/day
🟡 #6	ALT 46.62 & ALP 110.78 (near upper limits)	Avoid alcohol, limit fried/processed food
🟡 #7	RBC elevated at 6.05	Adequate hydration, monitor with physician

Foods to strictly avoid or limit:

- ❌ Refined sugar, white bread, maida, instant noodles, manchurian (bloating trigger + blood sugar spikes) - ❌ Fried foods, packaged snacks, trans fats (margarine, vanaspati) - ❌ Full-fat dairy in excess, coconut oil, palm oil (raise LDL) - ❌ Beef and pork (excluded) - ❌ Fruit juices, soft drinks, alcohol - ⚠️ Limit rice/roti to controlled portions; prefer whole grain versions

2 BMR, TDEE & Daily Calorie Target

Mifflin–St Jeor Formula (Male):

$$\begin{aligned}\text{BMR} &= (10 \times 84.35) + (6.25 \times 167) - (5 \times 32) + 5 \\ &= 843.5 + 1043.75 - 160 + 5 \\ &= 1,732 \text{ kcal/day}\end{aligned}$$

Parameter	Value
BMR	1,732 kcal
Activity Multiplier	1.2 (Sedentary)
TDEE	2,078 kcal
Daily Deficit	–500 kcal
🎯 Daily Calorie Target	~1,550–1,600 kcal/day
Daily Protein Target	100–110 g (1.6 g/kg × 58.5 kg lean mass)
Carbohydrates	~155–170 g (complex carbs only)
Fats	~45–50 g (prioritize unsaturated)

Expected fat loss:

0.4–0.5 kg/week → Target –8 to 10 kg over 4–5 months.

Diet Do's, Don'ts & Hydration

✔ Dietary DO's

Area	Action
Morning	Drink 2 glasses of warm water immediately on waking, before coffee or tea
Meal timing	Eat dinner before 8:00 PM; no food 2–3 hrs before sleep
Protein first	At every meal, eat protein first (eggs, dal, chicken) before carbs
Mindful eating	Eat slowly; avoid screens during meals; stop at 80% full
Meal prep	Prepare grilled chicken, boiled eggs, and washed veg on Sunday evening
Lab follow-up	Lipid profile + HbA1c at 3 months; body composition at 3 months; CBC at 3 months

✗ Dietary DON'TS

Avoid	Reason
Maida products (noodles, manchurian, white bread, biscuits)	Personal bloating trigger; spikes blood sugar; worsens HbA1c
Sugar in tea or coffee	Direct blood sugar impact; empty calories
Packaged chips, namkeen, biscuits	Trans fats, excess sodium — worsens lipid profile
Fruit juices and soft drinks	High glycemic; raises triglycerides
Skipping breakfast or lunch	Leads to overeating; slows metabolism
Eating at the desk during work	Promotes mindless overeating
Late-night snacking (after 9 PM)	Impairs overnight fat metabolism
Alcohol	Raises triglycerides; stresses liver (ALT already near upper limit)
Fried restaurant food	Trans fats, excessive calories, unknown oil quality
Crash dieting or skipping meals	Causes muscle loss and hormonal disruption

Daily Hydration Schedule

Time	What
On waking	400 ml warm water
Morning 9–11 AM	500 ml water
Around lunch	300 ml (sip before / after meal, not during)
Afternoon 2–4 PM	500 ml water
Evening snack	300 ml (buttermilk or lemon water counts)
Before dinner	300 ml water
Daily Total	3 – 3.5 litres

Why These Specific Foods Were Chosen

Food	Reason
Oats, brown rice, whole wheat	Low glycemic — reduces HbA1c, prevents blood sugar spikes
Moong / toor / masoor dal	Plant protein + fiber — lowers LDL cholesterol
Fish (surmai, rohu)	Omega-3 fatty acids — directly improve HDL, lower triglycerides and LDL
Flaxseeds, walnuts, chia seeds	Plant-based omega-3 — anti-inflammatory, heart-protective
Chicken breast	Lean protein — preserves muscle during calorie deficit
Eggs	Complete protein; good fats (HDL-supportive in moderation)
Low-fat paneer	Calcium + protein — supports bone mass (currently 3 kg, below optimal)
Spinach, methi, leafy greens	Iron, folate — supports RBC quality; fiber for gut health
Makhana, roasted chana	High satiety, low calorie — direct replacement for junk snacks
Almonds, walnuts	Unsaturated fats — reduce LDL, manage triglycerides
Buttermilk / curd	Probiotics — gut health, protein, aids digestion

3-Month Diet Milestones

Timeframe	Focus	Goal
Week 1–2	Habit building	Follow diet 80% adherence; no sugar in beverages
Week 3–4	Consistency	Meal prep routine established; hydration at 3 L/day
Month 2	Adaptation	Reduced bloating, more energy, better satiety
Month 3	Results	Repeat lipid profile + HbA1c; target improved values
3-Month Target		–4 to 5 kg body weight · lower LDL · HbA1c closer to 5.5%
